ALMEMO® Connect

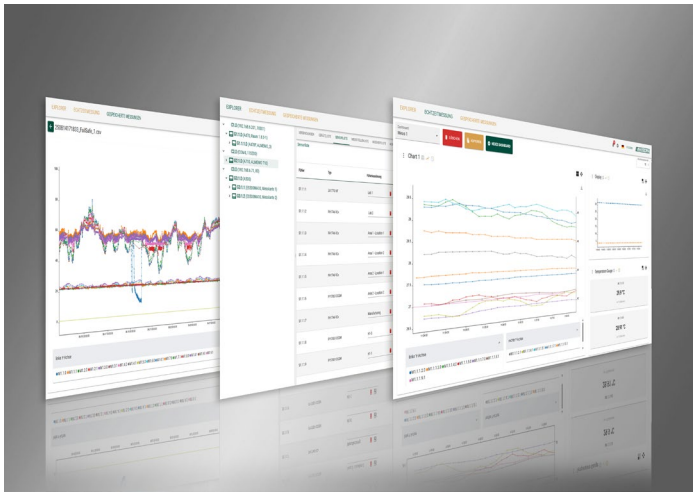

new

The free configuration and networking software ALMEMO® Connect is designed to be particularly user-friendly thanks to its intuitive operation. All important data such as device settings, sensor configurations and measured values can be seen at a glance.

The current program version is available for download at **www.ahlborn.com**.

- Fast, precise and reliable configuration by adjusting device parameters
- Online monitoring and evaluation of all measured values from connected devices
- Data is saved in csv format, which can also be used for processing in other software applications
- Parallel device configuration: Connect multiple interfaces simultaneously - configure multiple devices at the same time, even if they are not networked with each other
- Display of selected measured values in real time as measured value display, line graph or table
- Flexible dashboards: individually customizable with freely definable and changeable views
- Clear tree structure shows all connected devices, sensors and output modules
- Integrated server service: Continuous data acquisition, also for other applications via TCP interface
- Complete intuitive operation via a web browser
- Control also via a remote computer with TCP connection to the installation computer
- Creation of automatic support emails including relevant information attachments

Intuitive operation via a web browser.
